Question 1: Zero-Shot Prompting (Leap Year Check)

Write a zero-shot prompt to generate a Python function that checks whether a given year is a leap year.

Task:

- Record the AI-generated code.
- Test with years like 1900, 2000, 2024.
- Identify logical flaws or missing conditions.

The image shows a code editor window titled 'labassignment(3.5).py' with the following Python code:

```
1 #write a python program to check whether a given year year is a leap year or not.
2 year = int(input("Enter a year: "))
3 if (year % 4 == 0 and year % 100 != 0) or (year % 400 == 0):
4     print(f"{year} is a leap year.")
5 else:
6     print(f"{year} is not a leap year.")
```

Below the code editor is a terminal window showing the execution of the program. It displays three test cases: 1900 (not a leap year), 2000 (is a leap year), and 2024 (is a leap year).

Question 2: One-Shot Prompting (GCD of Two Numbers)

Write a one-shot prompt with one example to generate a Python function that finds the Greatest Common Divisor (GCD) of two numbers.

Example:

Input: 12, 18 → Output: 6

Task:

- Compare with a zero-shot solution.
- Analyze algorithm efficiency.

```
#generate a python program to find the gcd of two numbers :12 and 18
def gcd(a, b):
    while b:
        a, b = b, a % b
    return a
num1 = 12
num2 = 18
print(f"The GCD of {num1} and {num2} is {gcd(num1, num2)}")
```

The GCD of 12 and 18 is 6

Question 3: Few-Shot Prompting (LCM Calculation)

Write a few-shot prompt with multiple examples to generate a Python function that computes the Least Common Multiple (LCM).

Examples:

- Input: 4, 6 → Output: 12
- Input: 5, 10 → Output: 10
- Input: 7, 3 → Output: 21

Task:

- Examine how examples guide formula selection.
- Test edge cases.

```
21 #generate a python code to find LCM of two numbers
22 """
23 examples:
24 input:4 and 6
25 output:12
26 input:5 and 10
27 output:10
28 input:7 and 3
29 output:21
30 """
31 def lcm(a, b):
32     def gcd(x, y):
33         while y:
34             x, y = y, x % y
35         return x
36     return abs(a * b) // gcd(a, b)
37 num1 = int(input("Enter first number: "))
38 num2 = int(input("Enter second number: "))
39 print(f"The LCM of {num1} and {num2} is {lcm(num1, num2)}")
40
```

```

Enter first number: 7
Enter second number: 3
The LCM of 7 and 3 is 21

```

Question 4: Zero-Shot Prompting (Binary to Decimal Conversion)

Write a zero-shot prompt to generate a Python function that converts a binary number to decimal.

Task:

- Test with valid and invalid binary inputs.
- Identify missing validation logic.

```

40 #generate a python code that converts a binary number into decimal
41 binary_num = input("Enter a binary number: ")
42 decimal_num = int(binary_num, 2)
43 print(f"The decimal equivalent of binary {binary_num} is {decimal_num}")
